Make It Simple. SierraCMS streamlines case administration and offers convenient access in a web-based environment. And your clients will enjoy real cost savings.

Critical Administrative Functions. SierraCMS easily produces statements of financial affairs and schedules of assets and liabilities. Use this website to create the bankruptcy petition and related documents, including the top 20 unsecured claims and other first-day filings.

Multiple-User Access. Multiple users can enter required data, easily amend previously filed documents, and ensure that statements and schedules are filed on a timely basis. Clients achieve savings by directly inputting their own data, reducing their professional fees.

Importing of Schedule Data. Importing data from an Excel template greatly reduces the time and professional fees associated with filling out the forms.

Electronic Filing. SierraCMS offers easy-to-use PACER/ECF interface for electronic filing.

Multiple Customizable Service Lists. You will enjoy easy tracking and updating to the master service list, as well as the ability to create additional customized service lists. Lists can be printed as labels or used in a mail-merge function.

Pre-Printed Proofs of Claim. Custom printing of each proof of claim includes the debtor name and case number, creditor name, creditor address, creditor claim amount and class, and customized return mailing instructions. All data is extracted from the claim schedules and is available on-line.

Claims Objections. Matching the claim's unique identification number to the scheduled amount results in a streamlined claims objection process and easy preparation of objection exhibits by objection type.

Claims Analysis and Reconciliation. Streamlining the claims analysis and reconciliation process helps creditors avoid the headaches of determining their type of claim and identifying the debtor against which they will file a claim. This reduces the number of claims objections and significantly reduces costs.

Reports. Easy-to-produce reports can be used as exhibits in the claims objection process, including amended claims, duplicate claims, disputed claims and other customizable objections.

Pre-Printed Ballots. Customized, pre-printed ballots display the creditor's information and unique claim identification number, with an option to add issues to be voted on. And SierraCMS offers quick tabulating and production of ballot reports by class.

Payment of Claims. SierraCMS lets you designate the allowed claim amounts and class or sub-class for plan disbursement purposes.

On-Line Public Access. An optional public access website can display all statements and schedules and the master mailing matrix and related documents. Interested parties can download this information without your involvement, at no charge.
